

Doc

Documentation framework and open-source licensing strategy for Vibemind

Overview

The Doc folder manages Vibemind's documentation infrastructure and decisions around open-source licensing and community access. As the platform expands across multiple specialized spaces with complex interactions, comprehensive documentation becomes both a technical necessity and a strategic asset.

Key Features & Contents

- **Technical Documentation:** Architecture guides, API references, space-specific documentation (in `docs/`)
- **User Guides:** Onboarding materials, feature walkthroughs, best practices for each space
- **Developer Documentation:** Extension frameworks, integration patterns
- **Startup Scripts:** `start_vibemind_debug.bat`, `start_vibemind_production.bat` for different modes
- **Licensing Framework:** Comparison and evaluation of open-source models (GPL, MIT, proprietary) — concept under consideration, no license text present
- **Security & Privacy:** Documentation of data storage and privacy-first design principles

Current Status

- **Technical Documentation:** Foundation exists for core architecture (`docs/01_systembeschreibung.md` through `docs/08_entwicklungsphilosophie.md`); space-specific docs in development
- **Licensing Strategy:** Conceptual deliberations; no formal license text created
- **Community Engagement:** Active Discord community with approximately 70 members; social media channels (Instagram, LinkedIn, etc.) planned for launch once video agents are production-ready
- **Compliance Documentation:** Not started; privacy is addressed architecturally through local deployment option (Ollama)
- **Deployment Guides:** Basic `.env.example` and startup scripts available; comprehensive deployment documentation planned

Roadmap

- **Phase 1** (Q2 2026): Finalize licensing strategy and conduct legal review
- **Phase 2** (Q2 2026): Complete technical documentation for all spaces
- **Phase 3** (Q3 2026): Responsible disclosure and security audit before licensing decision
- **Phase 4** (Q3 2026): Publish open-source components with accompanying documentation
- **Phase 5** (Q4 2026): Create community contribution framework and space development guidelines
- **Phase 6** (2027): Multilingual documentation for international adoption

Ecosystem Fit

Vibemind's commitment to documentation and thoughtful licensing reflects its ethical foundation and long-term platform thinking. Documentation transforms Vibemind from an internal product into a platform that others can extend and build upon.
