

Ideas.Space

Creative idea management with Bubbles hierarchy, auto-linking, AI exploration, and voice-driven workflow design.

Overview

Ideas.Space is the primary creative workspace in Vibemind. It manages two core concepts: **Bubbles** (containers/workspaces) and **Ideas** (content within Bubbles). Users can create Bubbles via voice or text, collect ideas within them, automatically link them, export into 11 different formats, and start AI-driven exploration sessions.

The space has **two dedicated backend agents** (51 events total):

Agent	File	Stream	Event Count
BubblesAgent	agents/bubbles_agent.py	events:tasks:bubbles	14 Events
IdeasAgent	agents/ideas_agent.py	events:tasks:ideas	37 Events

***Note:** Rachel is NOT an Ideas-specific agent, but rather the central voice interface for the entire Vibemind platform. See "Rachel Voice Agent" section below.*

Backend Agent: BubblesAgent (14 Events)

Event	Tool Function	Description
bubble.list	list_bubbles	List all bubbles
bubble.create	create_bubble	Create new bubble
bubble.enter	enter_bubble	Navigate into bubble
bubble.exit	exit_bubble	Exit bubble
bubble.back	exit_bubble	Alias for exit
bubble.delete	delete_bubble	Delete bubble
bubble.delete_all_except	delete_all_bubbles_except	Delete all except one
bubble.update	update_bubble	Change bubble metadata
bubble.find	find_bubble	Find bubble
bubble.stats	get_bubble_stats	Get statistics
bubble.score	score_bubble	Score bubble
bubble.evaluate	evaluate_bubble_evolution	Shuttle pipeline: evaluation
bubble.promote	promote_bubble	Shuttle pipeline: promote to project
bubble.current	get_current_space	Get current position

Backend Agent: IdeasAgent (37 Events)

Core Idea Events (9)

Event	Tool Function
idea.list	list_ideas
idea.count	count_ideas
idea.create	create_idea
idea.find	find_idea
idea.update	update_idea
idea.delete	delete_idea
idea.move	move_idea
idea.current_space	get_current_space

Connection Events (6)

Event	Tool Function
idea.connect	connect_ideas
idea.disconnect	disconnect_ideas
idea.connect_multi	connect_ideas_multi
idea.link_to_root	link_idea_to_root
idea.auto_link	auto_link_ideas
idea.analyze_links	analyze_and_suggest_links

Format Conversion Events (11)

All dispatch to `convert_format` with different format types:

idea.format_note, idea.format_action_list, idea.format_pros_cons, idea.format_hierarchy,
idea.format_specs, idea.convert_format, idea.format_kanban, idea.format_mindmap, idea.format_swot,
idea.format_user_story, idea.format_flowchart

Advanced AI Events (5)

Event	Tool Function
idea.summarize	summarize_idea
idea.whitepaper / idea.white_paper	generate_white_paper
idea.expand	expand_ideas
idea.explain	explain_idea

Event	Tool Function
<code>idea.classify</code>	<code>classify_idea</code>

Exploration Events (10)

Event	Tool Function
<code>idea.explore.start</code>	<code>start_exploration</code>
<code>idea.explore.stop</code>	<code>stop_exploration</code>
<code>idea.explore.status</code>	<code>get_exploration_status</code>
<code>idea.explore.accept</code>	<code>accept_connection</code>
<code>idea.explore.reject</code>	<code>reject_connection</code>
<code>idea.explore.depth</code>	<code>explore_deeper</code>
<code>idea.explore.visualize</code>	<code>visualize_exploration</code>
<code>idea.explore.respond</code>	<code>respond_to_exploration_question</code>
<code>idea.explore.direction</code>	<code>set_exploration_direction</code>
<code>idea.explore.continue</code>	<code>continue_exploration</code>

Other Events

Event	Tool Function
<code>idea.add_image</code>	<code>add_image</code>
<code>idea.format_table</code>	<code>format_idea_as_table</code>
<code>idea.generate_doc</code>	<code>generate_project_doc</code>

Explorer Subsystem

AI-scientist-inspired exploration of idea connections (1883 lines of exploration code + 6 explorer modules):

Module	File	Purpose
Connection Evaluator	<code>explorer/connection_evaluator.py</code> (14.8KB)	Evaluation of idea connections
Exploration Clarification	<code>explorer/exploration_clarification.py</code> (24.2KB)	Clarification dialog during exploration
Exploration Repository	<code>explorer/exploration_repository.py</code> (18.1KB)	DB persistence for explorations
Idea Journal	<code>explorer/idea_journal.py</code> (12.8KB)	Exploration protocol
Idea Node	<code>explorer/idea_node.py</code> (8.6KB)	Node in exploration tree

Module	File	Purpose
Idea Tree Search	<code>explorer/idea_tree_search.py</code> (24.2KB)	AI-scientist tree search

Tools

Space-specific tools in `python/spaces/ideas/tools/`:

Tool Module	Purpose
<code>idea_tools.py</code>	Idea CRUD, linking, auto-link, whitepaper, expand
<code>bubble_tools.py</code> (60.2KB)	Bubbles CRUD, navigation, scoring, shuttle pipeline
<code>exploration_tools.py</code> (1883 lines)	10 async exploration functions
<code>summary_tools.py</code>	LLM summaries
<code>format_dispatcher.py</code>	Format routing (11 formats)

Rachel Voice Agent (Platform-Wide)

Rachel (`agents/rachel_agent.py`) is the central voice interface for the entire Vibemind platform — not just Ideas.Space. Her main task: **help people organize and get things sorted**.

- **1 Tool:** `send_intent(user_request: str)` — routes user request to IntentOrchestrator, which can route to all spaces
- Receives results asynchronously via NotificationQueue / StatusListener
- Does NOT execute backend tools directly — orchestrates via the IntentOrchestrator
- **Multilingual:** Currently used primarily in German; planned for all EU languages

Current Status

- Bubble hierarchy and navigation fully functional (14 events)
- Idea CRUD with auto-link, classify, whitepaper, expand (37 events)
- Auto-linking implemented (`auto_link_ideas(threshold=0.5, max_links=10)`)
- 11 format types available (Kanban, mindmap, SWOT, user story, etc.)
- Exploration engine fully implemented (10 async events, AI-scientist tree search)
- Explorer subsystem with 6 modules (~100KB code)
- Rachel voice interface operational (1 tool: `send_intent`)
- Shuttle pipeline (evaluate/promote) via BubblesAgent
- Rowboat sync for business context in development

Roadmap

-
- Complete Rowboat sync for rich business context (Q1-Q2 2026)
 - Implement advanced auto-linking with The Brain.Space insights
 - Add collaborative multi-user spaces and shared design sessions
 - Develop specialized templates for common use cases
 - Create idea evolution and version tracking system
 - Build visualization of idea-to-execution flow
 - Implement chat mode alongside conversation mode

Ecosystem Fit

Ideas.Space is the gateway to Vibemind. Users express their intent here, and the space translates it into work for other spaces: Coding.Space for development, Desktop.Space for browser, messaging, and desktop automation, AgentFarm.Space for orchestration. The Brain.Space provides patterns and possibilities from user data. Ideas.Space is the UX layer that makes the entire platform accessible.
