

Rowboat.Space

Central data orchestration with knowledge graph, content generation, and Docker management.

Overview

Rowboat.Space (internally: "Roarboot") is the data backbone of Vibemind. It provides unified access to business data, generates content (emails, meeting briefs, decks), processes voice notes, and manages its own Docker container. The data source is a knowledge graph in the Rowboat submodule.

Backend Agent: RoarbootBackendAgent (13 Events)

File: `python/spaces/rowboat/agents/roarboot_agent.py`

Knowledge Graph (2 Events)

Event	Tool Function	Description
<code>roarboot.search</code>	<code>search_knowledge</code>	Search knowledge graph
<code>roarboot.query</code>	<code>query_knowledge</code>	Structured query

Content Generation (3 Events)

Event	Tool Function	Description
<code>roarboot.email_draft</code>	<code>draft_email</code>	Generate email draft
<code>roarboot.meeting_brief</code>	<code>generate_meeting_brief</code>	Create meeting brief
<code>roarboot.deck</code>	<code>generate_deck</code>	Generate presentation

Voice Notes (1 Event)

Event	Tool Function
<code>roarboot.voice_note</code>	<code>process_voice_note</code>

Docker Management (4 Events)

Event	Tool Function	Description
<code>roarboot.docker.start</code>	<code>start_docker</code>	Start Rowboat container
<code>roarboot.docker.stop</code>	<code>stop_docker</code>	Stop container
<code>roarboot.docker.restart</code>	<code>restart_docker</code>	Restart container
<code>roarboot.docker.status</code>	<code>docker_status</code>	Query container status

System (3 Events)

Event	Tool Function
roarboot.status	get_status
roarboot.open	open_webview
roarboot.reset	reset_conversation

Key Components

Component	File	Purpose
Backend Agent	agents/roarboot_agent.py	13 events → 13 tools
Roarboot Tools	tools/roarboot_tools.py	Knowledge, content, voice note tools
Docker Tools	tools/docker_tools.py	Container management
Roarboot Client	tools/roarboot_client.py	HTTP client to Rowboat service
Update Checker	workers/update_checker.py	Status checking
Rowboat Submodule	rowboat/ (Git submodule)	Knowledge graph service

Rowboat Submodule

The actual knowledge graph system runs as a Docker container:

```
python/spaces/rowboat/rowboat/ (Git submodule)
■■■ apps/ # Rowboat applications
■■■ data/ # Data directory
■■■ docker-compose.yml
■■■ Dockerfile
■■■ start.sh
■■■ README.md
```

Technology Stack

- **Knowledge Graph:** Rowboat-native graph service (Docker)
- **MCP Integrations:** Composio, OAuth for business tools
- **Content Generation:** LLM-driven email, brief, and deck generation
- **Docker:** Self-managed container lifecycle management
- **Event Streaming:** Redis stream `events:tasks:roarboot`

Current Status

Implemented

- Knowledge graph search and query (2 events)
- Content generation: email draft, meeting brief, deck (3 events)
- Voice note processing (1 event)
- Docker container management: start, stop, restart, status (4 events)
- System status, webview, conversation reset (3 events)
- Rowboat submodule with Docker Compose
- MCP integration framework

In Development

- Sync with Ideas.Space for workflow guidance
- Expansion to 10+ business tool integrations
- Real-time change notifications

Roadmap

- Complete Ideas.Space sync for full workflow guidance (Q1-Q2 2026)
- Expand pre-built integrations to 25+ common business tools
- Implement advanced data lineage and dependency tracking
- Add data transformation and ETL pipeline capabilities
- Create data governance and quality assurance framework
- Develop predictive insights based on historical data patterns

Ecosystem Fit

Rowboat.Space is the connective tissue of Vibemind. It feeds business data to The Brain.Space for analysis and pattern discovery. Ideas.Space uses Rowboat data for business context. Coding.Space accesses business data. N8n.Space automates external data workflows. Desktop.Space learns from business context. The entire platform becomes more intelligent through Rowboat's business understanding.
