

The Team / Vibeminders

Each team member as a mini-CEO — AI-augmented collaboration across development, marketing, ethics, and business.

Overview

Vibemind's team philosophy: each team member operates like a mini-CEO. Vibemind enables every individual to work like a small company — with full oversight and responsibility for development, marketing, ethical guidelines, and business structures. Inspired by the KiloCode vision that AI tools give individual people the power of entire teams.

The team consists of a small human founding team, augmented by AI-driven agents covering every area: from code generation to video production to business data management.

The Core Team — The Vibeminders

The core team consists of real people who have been part of Vibemind from the very beginning. Each member operates like a mini-CEO in their domain — Vibemind gives everyone the tools to work as a one-person company.

- **Felix Baumann**: Founder and product lead; strategic direction, technology decisions, platform vision
- **Lisa Kellner**
- **Stephane Boghossian**
- **Moritz Baumann**
- **Steffen Wehning**
- **Surya Narayanan**

Each team member has chosen to work with Vibemind from the very beginning and validate the platform as early adopters. The names in the 3D Multiverse represent real team members — not AI personalities.

Transparency Approach

The team is committed to open communication about AI technology use:

- Transparent labeling of AI-generated content
- All human team members agree to the hybrid approach
- Ethical guidelines for AI use (see [docs/readme_purpose.md](#))

Roadmap

- Phase 1 (Q2 2026): Document hybrid team collaboration patterns
- Phase 2 (Q3 2026): Best practices guide for responsible AI use in teams

- Phase 3 (Q3 2026): Expand specialized domain-expert personas as needed
- Phase 4 (Q4 2026): Transparency dashboard for human vs. AI origin of communication
- Phase 5 (2027): Framework for continuous AI-team evolution

Ecosystem Fit

The Vibeminder team lives the vision that every person with the right AI tools can become a one-person company. Vibemind is both product and proof: the team uses its own platform to conduct development, marketing, business organization, and ethical governance — each team member a mini-CEO with AI agents as their staff.
