

GDPR

Data sovereignty and privacy-first deployment infrastructure for GDPR compliance

Overview

The GDPR concept implements Vibemind's approach to data sovereignty with three deployment paths: local, custom endpoints, and cloud services. The goal is to meet European data protection standards while maintaining maximum flexibility.

Three-Tier Architecture

Tier	Description	Implementation Status
Local	Ollama integration for local inference	Base client available (<code>python/swarm/ollama_client.py</code> , llama3.1:8b)
Custom Endpoints	Configurable API keys in <code>.env</code>	Functional via OpenRouter and other providers
Cloud Services	OpenAI, Anthropic, OpenRouter	Integrated and in productive use

Current Implementation Status

Implemented

- **Ollama Client:** Wrapper for local LLM inference (`python/swarm/ollama_client.py`)
- **Cloud Provider Integration:** OpenAI, Anthropic, OpenRouter via configurable API keys in `python/config.py`
- **Configurable Endpoints:** `.env`-based configuration for different providers

Partially Implemented

- **OAuth:** Exists only in submodules (Coding_engine `src/api/auth/oauth.py`, Rowboat), **not integrated in main system**

Not Implemented

- **GDPR Compliance Tooling:** No audit logs, data export utilities, or compliance reporting available
- **Formal GDPR Certification:** Not performed
- **Data Encryption at Rest:** Not implemented
- **Automated Compliance Dashboard:** Not available
- **Federated Learning:** Not implemented

Note on Privacy: The architecture supports privacy through the local deployment option (Ollama) — user data never leaves the user's machine. However, formal GDPR compliance processes and tooling have not yet been implemented.

Roadmap

- Phase 1 (Q2 2026): Complete OAuth integration in main system
- Phase 2 (Q3 2026): Conduct independent GDPR compliance audit
- Phase 3 (Q3 2026): Automated compliance reporting dashboard
- Phase 4 (Q4 2026): Data encryption at rest for all storage backends
- Phase 5 (2027): Federated learning workflows
- Phase 6 (2027): Industry-specific compliance packages (HIPAA, FedRAMP, ISO 27001)

Ecosystem Fit

The three-tier architecture serves different market segments:

- **Local:** Enterprises and security-conscious institutions
- **Custom Endpoints:** Organizations with existing infrastructure
- **Cloud Services:** SMBs and individuals focused on convenience

This flexibility creates multiple adoption paths and positions Vibemind for regulated industries (healthcare, finance, government).
